

LDS

Surface Ship Camel

The LDS Surface Ship Camel was designed to berth DDG and CG class surface vessels. Sealed tubular steel construction 100% filled with closed cell foam along with an improved anti-fouling coating and 316 stainless steel hardware improves the camel's service life and extends maintenance intervals. The 10 ft by 40 ft composite decking surface makes the LDS camel an ideal working platform. The long body distributes loads to multiple piles and non-marking grey fenders will not damage the ship's hull coatings. The LDS camel can also be custom designed to a variety of lengths and widths in addition to accommodating various deck load conditions.
