

REMOTE ASSEMBLY AND FABRICATION

Our Mobile Assembly Team enables Maritime International to provide customers with oversized products normally impossible or financially impractical to ship as a completed final assembly. With Maritime's highest skilled fitters, welders, quality control and project management personnel comprising the mobile assembly team, the largest Naval Products offered can be trucked or shipped anywhere in the world and assembled with the same precision and quality as you would expect from a heavy fabrication facility. Equipped with all of the tools necessary to perform heavy fabrication in the field, the team is able to assemble, test and install each item with minimal assistance from the end user. The mobile assembly team is equipped with generators, portable welding units, air compressors, equipment/tool locker and a multitude of machine and hand tools. Our crew has performed installations and maintenance at facilities all over the world in some of the most remote locations.
